MODULAR CLAMPING SYSTEMS

CAM SYSTEM

The patented CAM SYSTEM has been developed to easily clamp workpieces with varied forms. This compact product enables double locking (axial and radial) using the eccentric and propeller principle. With a rotation of approximately 15°, contact is made with the workpiece with the complete clamping face of the CAM.

The CAM SYSTEM clamps the workpiece with a clamping force of 4,000 kg (t) and 2,000 kg (s). It comes supplied with both cap heads, bolts and T-nuts to suit the particular machine tool cross slots. CAM SYSTEM "g" is supplied singly, to the customer's detailed grid specification.
