

MODULAR CLAMPING SYSTEMS

CIVI 2000

Hold more. Make more.

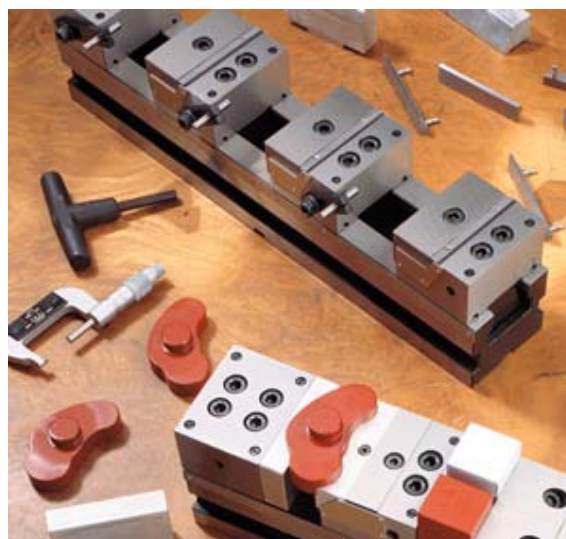

CIVI 2000 is a revolutionary modular Multi-Clamping system that reduces downtime and maximizes machine tool productivity. It allows for the clamping of multiple workpieces in less space, which allows for:

- Reduced setup times
- Increased chip making time
- Greater machine productivity

The CIVI 2000 is a highly modular system that can be used:

- As is on your existing machines
- With a customized tombstone
- With our COMBIDEX indexing tables
- Together with our CLAK quick-change jaws

Tetrablok **New!**

Hold more. Make more. Pay less.

The Tetrablok is our new, cost-effective multi-part workholding system. Each Tetrablok can hold up to four workpieces, and comes complete with one base, one fixed support, four clamping units, one pair of round positioning keys, and one T wrench.

The Tetrablok comes in lengths from 400mm (15.75") to 630mm (24.8") and, like the CIVI2000, can be used:

- As is on your existing machines
- With a customized tombstone
- With our COMBIDEX indexing tables
